

Daiwa House Industrial Corporation

Award-winning design

Daiwa House Industrial Corporation design and construct housing. They installed Classic GDS and MicroGDS five years ago, fully replacing Classic GDS with MicroGDS in 1998. In 1997 they won an award for their work with MicroGDS.

“We were surprised to receive an award, but it encouraged us to work even harder”, they said. “In the project from which these images are taken, the exterior was more complex than in our previous projects. Producing and rendering the model correctly was quite challenging. But in the end we and our clients really liked the images so it was a worthwhile exercise.”

They are highly motivated to produce higher quality work to satisfy their clients. To this end they sometimes use MicroGDS together with other paint and computer graphics software, and generate multimedia presentations.

The company is currently working on various projects using MicroGDS and other CAD products. It will be very interesting to see the results of these projects.
